A positive idea for us to use now to grow healthy local food in cities...

I was inspired tonight by a different perspective on producing food in cities, the vertical farm!

<http://www.verticalfarm.com/>

Producing food in stacked greenhouses (or possibly better, using vertical farms to use more sunlight), in cities, to grow our food instead of from who knows where. Totally hydroponic, no dirt required. Just nutrients to water that circulates and is therefore controlled. It's a technology, but the cost of doing this in cities is limited by the high cost of real estate. There are practical solutions out there.
