

Evidence that the Earth and People are connected by geomagnetic fields

I read about Earth Day on the Heathmath [blog](http://www.glcoherence.org/monitoring-system/about-system.html) and the article there had a link to the Global Coherence Initiative: <http://www.glcoherence.org/monitoring-system/about-system.html>

One thing on the site jumped out at me:

A number of important findings already have emerged. For example, changes in the earth's magnetic field are associated with changes in brain and nervous system activity; performance of athletic, memory and other tasks; sensitivity in a wide range of extrasensory perception experiments; synthesis of nutrients in plants and algae; the number of reported traffic violations and accidents; mortality from heart attacks and strokes; and incidence of depression and suicide. It's interesting to note that *changes in geomagnetic conditions affect the rhythms of the heart more strongly than all the physiological functions studied so far*.

when I read this I felt a wave of love and compassion towards the Earth and a little teary for all the things humans have done to the Earth and how I have contributed to them by for example buying lots of stuff and throwing away the plastic wrappings. Then I felt compassion for myself and others who harm the Earth.
